BOATWASHER

Clean Profit

The objects of The Stark Boatwasher system are:

- To allow you to keep the bottom of your boat clean without resorting to the use of any poisonous anti-fouling paints
- To retain the speed resources of the boat
- To save on fuel consumption
- Less emission of fuel, oil and fumes
- No anti-fouling (poisonous) paints

The Swedish National Chemicals Inspectorate (Kemikalieinspektionen) conducted an efficiency test of Stark 1995. The test showed that Stark is highly efficient.

stark
BOATWASHER

Fouling of boat hulls, which reduces speed and increases the fuel consumption of boats, has always been a problem.

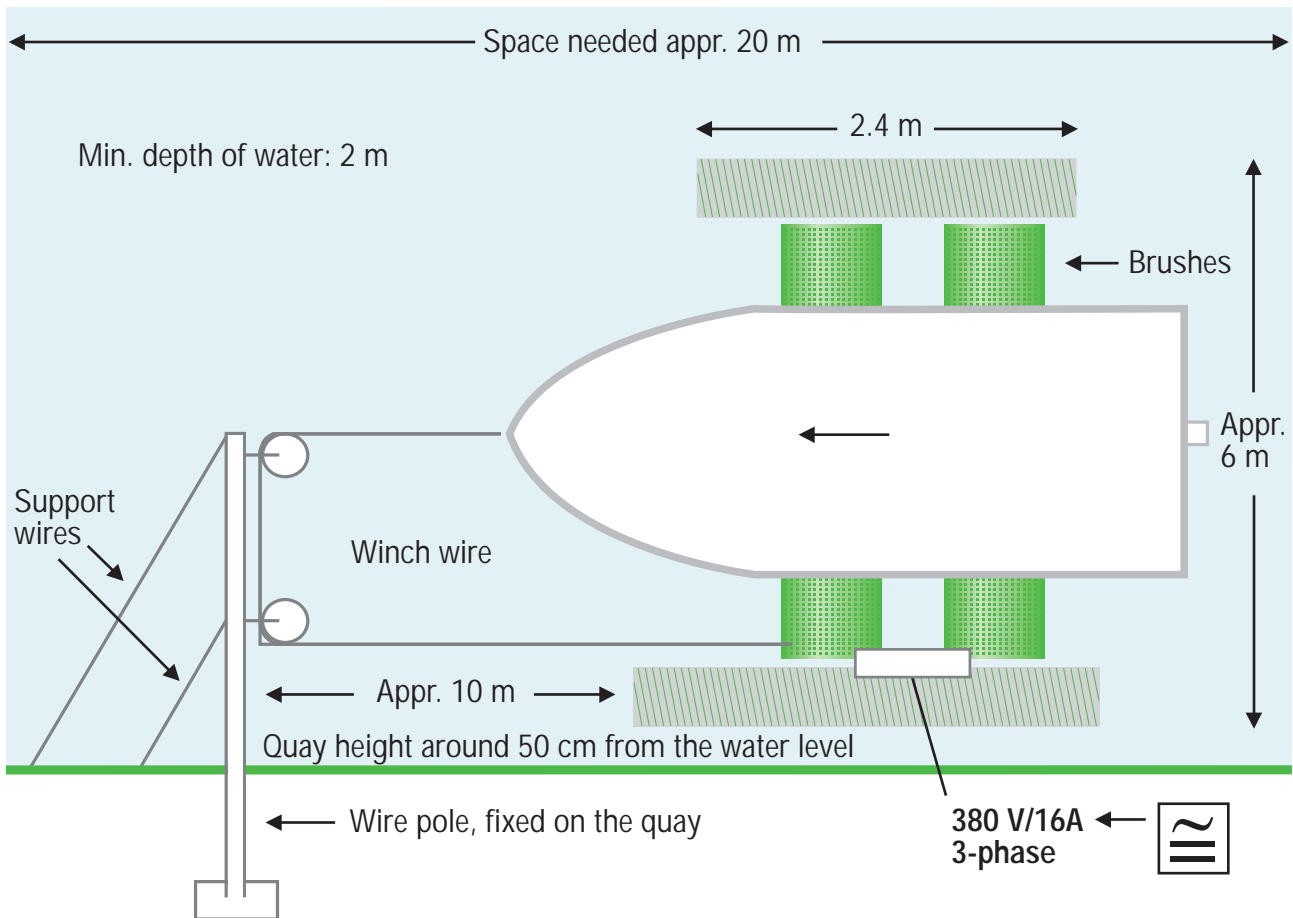

The Stark Boatwasher cleans the barnacles off the bottom of your boat.

SETTING UP THE STARK BOATWASHER

The brushes are rotated by hydraulic motors, driven by a 4 kW electrical motor. The angle of the brushes follows the shape of the boat bottom. The angle can also be changed manually.
